OnRush

e log

Any organization needs to track its work environment events, and that is usually done on a paper Logbook. These events sometimes are referred to, for security and accountability reasons and this process is very time consuming.

eLogBook is a web-based application that tracks any organization's working environment events. The system can be used by employees in Computer Operation Support Center, Refinery Operation Control Center, Gate Guard Security Control, and many other organizations.

The following are some of its features

Supports multi-organization Supports multi-working groups within an organization. It tracks events for different working shifts or any other classification of work groups. Supports different types of events, configurable by the client. Event Types are configured at organization level to account for different needs. An Event can be assigned to a category for better classification and reporting. Categories are set at the Organization level. Supports pre-defined phrases at the workgroup and employee level. These two lists are maintained separately. At the time of Event creation or update, employee can select these phrases to be pasted in the event text instead of typing them. Files of any type could be uploaded and attached to any event in the system. Search Facility to locate any event(s) by

Date, Time, Organization, Employees, any many other search criteria strings. User Authentication can be done either by the Application Security Engine or via LDAP, NTLM authentication, or any client's security exit.
